

# CBB 752 - Biomedical Data Science: Mining and Modeling

[Home](#) [Syllabus](#) [Course Info](#) [Discussion Sections](#) [Assignments](#) [Quiz Archive](#)

[Final Project](#)

## Course Description

Rapid developments in bio- and information- technology and are changing the way that biomedical scientists interact with data. Traditionally, data were the end result of laborious experimentation, and their interpretation mostly involved careful thought and background knowledge. Today, data are increasingly generated much earlier in the scientific workflow and are much larger in scale. Also, before the data can be interpreted, extensive computational processing is often necessary. Thus, the data deluge in biomedicine now requires mining and modeling on a large scale - ie biomedical data science.

This course aims to equip students with some of the concepts and skills relevant to biomedical data science, with an emphasis on bioinformatics, a sub-discipline of this broader field, through examples of mining and modeling of genomic and proteomic data. More specifically, bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. Specific topics to be covered include sequence alignment, large-scale processing, next-generation sequencing data, comparative genomics, phylogenetics, biological database design, geometric analysis of protein structure, molecular-dynamics simulation, biological networks, mining of functional genomics data sets, and machine learning approaches for data integration.

## Overall Flow of the Class

(Module = Group of Lectures)

- Introduction
- Module on "the Data" (Genomic, Proteomic & Structural Data), introducing the main data sources (their properties, where you access, &c)
- Module on Databases & Data Science Issues (Knowledge Representation incl. Sem. Web & Privacy, Provenance & Standards)
- Module on Mining (Alignment & Variant Calling, Supervised & Unsupervised Approaches, Networks)

- Module on Cell Modeling
- Module on Molecular Modeling

## Lectures

- MW 1:00 - 2:15 PM, Bass 305

## Discussion Section

- Bass 405 or Bass 205 (subject to change)

## Different headings for this class (4 variants)

- CB&B752/CPSC752 - Grad. w/ programming
  - This graduate-level version of the course consists of lectures, in-class tests, discussion section, programming assignments, and a final programming project.
- MB&B752/MCDB752 - Grad. w/o programming
  - This graduate-level version of the course consists of lectures, in-class tests, discussion section, written problem sets, and a final (semi-computational section and a literature survey) project. Unlike CBB752, there is no programming required.
- MB&B 753b3/MB&B 754b4 - Modules
  - For graduate students the course can be broken up into two “modules” (each counting 0.5 credit towards MB&B course requirement):
  - 753 - Biomedical Data Science: Mining (1st half of term)
  - 754 - Biomedical Data Science: Modeling (2nd half of term)
  - Each module consists of lectures, in-class tests, written problem sets, and a final, graduate level written project that is half the length of the full course’s final project.
- MB&B452/MCDB452/S&DS352 - Undergrad.
  - This undergraduate version of the course consists of lectures, in-class tests, discussion section, written problem sets, and a final (semi-computational section and a literature survey) project. The programming assignments from CB752 can be substituted for the written work by permission of instructor.
- Auditing
  - This is allowed. We would strongly prefer if you would register for the class.

## Prerequisites

The course is keyed towards CBB graduate students as well as advanced undergraduates and graduate students wishing to learn about types of large-scale quantitative analysis that whole-

genome sequencing and forms of large-scale biological data will make possible. It would also be suitable for students from other fields such as computer science, statistics or physics wanting to learn about an important new biological application for computation.

Students should have:

- A basic knowledge of biochemistry and molecular biology.
- A knowledge of basic quantitative concepts, such as single variable calculus, basic probability & statistics, and basic programming skills.

These can be fulfilled by: MBB 200 and Mathematics 115 or permission of the instructor.

## Class Requirements

### Discussion Section / Readings

Papers will be assigned throughout the course. These papers will be presented and discussed in weekly 60-minute sections with the TFs. A brief summary (a half-page per article) should be submitted at the beginning of the discussion session.

### In-class tests: Quiz

- There will be a quiz covering the 1st half of the course.
- There will be a quiz covering the 2nd half of the course. Quizzes will comprise simple questions that you should be able to answer from the lectures plus the main readings.

For references, please refer the previous [Quiz Archive](#)

### Programming Assignments (Req'd for CBB and CS grad. students)

- There will be four homework assignments including assignment 0. We will try to promote the idea of reproducible research and using version control system, specifically GitHub, in facilitating the process of homework submission.

### Non-programming Assignments

- There will be equivalent four homework assignments (including assignment 0), particularly for MB&B and MCDB students without a programming background. The programming part will be replaced with assignments involving the use of web-based tools or essay questions.

# Syllabus

The course syllabus as a single PDF can be found [HERE](#)

## Pages from previous years

- 2019 Spring is the 22nd time Bioinformatics has been taught at Yale. Pages for the 21 previous iterations of the class are available. Look at how things evolve!
- [2018 Spring](#)
- [2017 Spring](#)
- [2016 Spring](#)
- [2015 Spring](#)
- [2014 Spring](#)
- [2012 Fall](#)
- [2012 Spring](#)
- [2011 Spring](#)
- [2010 Spring](#)
- [2009 and earlier \(12 years of classes, starting in '98\)](#) (Note the pre-2010 course was Genomics & Bioinformatics; after 2010, the course contains all of the "Bioinformatics" of previous years and then more (!) with less "Genomics".)

## Syllabus

CBB752-spg-19-schedule-cbb752b19 : 2019 Public

#	Day	Date		Topic	Public Comment	URL
	M	1/14	--	*YALE* Spring term classes begin, 8.20 a.m.		
	F	1/18	--	*YALE* Friday classes do not meet; Monday classes meet instead		
	M	1/21	--	(MLK)		
<b>Data Mining (1st Half)</b>						
1	M	1/14	MG	Introduction		
2	W	1/16	KC	DATA 1 - Knowledge Representation & Databases		
3	F	1/18	MDS	DATA 2 - Genomics		
4	W	1/23	JR	DATA 3 - Proteomics		
5	M	1/28	JR	DATA 4 - Proteomics		
6	W	1/30	MG	DATA 5 - Introduction to personal genomes		
7	M	2/4	MG*	DATA 6 + MINING 1 - Alignment (seq. comparison & multi-seq. alignment)		
8	W	2/6	MG	MINING 2 - Fast Alignment & Variant Calling (inc. a focused section on SVs)		
9	M	2/11	MG	MINING 3 - Rare Variants and ExAC		
10	W	2/13	MG	MINING 4 - More Variant Calling		
11	M	2/18	TF	Quiz on 1st Half		
12	W	2/20	MG*	MINING 5 - Unsupervised Mining (focusing on spectral methods, eg SVD)		
13	M	2/25	MG*	MINING 6 - Supervised Mining (focusing on DTrees & SVMs)		
14	W	2/27	MG*	MINING 7 - Network Prediction		
15	M	3/4	MG*	MINING 8 - Network Analysis & Deep Learning		
16	W	3/6	--	OPEN DAY FOR SNOW (No class!)		
	F	3/8	--	*YALE* Spring recess begins, 5.30 p.m.		
<b>Simulation (2nd Half)</b>						
	M	3/25	--	*YALE* Classes resume, 8.20 a.m.		
17	M	3/25	CO	Protein Simulation I		
18	W	3/27	CO	Protein Simulation II		
19	M	4/1	CO	Protein Simulation III		
20	W	4/3	CO	Markov Models I		
21	M	4/8	CO	Markov Models II		
22	W	4/10	SK	Cell/Immune Modeling I		
23	M	4/15	SK	Cell/Immune Modeling II		
24	W	4/17	SK	Cell/Immune Modeling III		
25	M	4/22	MG*	Final Presentations		
26	W	4/24	TF	Quiz on 2nd Half		
	F	4/26	--	*YALE* Classes end, 5.30 p.m.; Reading period begins		
	F	5/3	--	*YALE* Final examinations begin, 9 a.m.		
	W	5/8	--	*YALE* Final examinations end, 5.30 p.m.		
	F	5/10	--	*TENT* Term grades due for seniors, 5:30 p.m.

## Contact Info

For general correspondence and questions, please contact us at:

cbb752 (at) gersteinlab.org

## Instructor-in-Charge

Name	Abbr	Office	Email
Mark Gerstein	MG	Bass 432A	contact.gerstein.info

## Guest Instructors

Name	Abbr	Office	Email
Corey O'Hern	CO	Mason Laboratory	corey.ohern (at) yale.edu
Steven Kleinstein	SK	300 George St	steven.kleinstein (at) yale.edu
Jesse Rinehart	JR	West Campus	jesse.rinehart (at) yale.edu
Matthew Simon	MDS	West Campus	matthew.simon (at) yale.edu
Kei Cheung	KC	300 George St	kei.cheung (at) yale.edu
Carl Zimmer	CZ	266 Whitney Ave	carl.zimmer (at) yale.edu

Consultation is available UPON REQUEST or according to times stipulated by the individual instructors. Prof. Gerstein's office office hours will usually be right after some the classes.

## Teaching Fellows (TF)

Name	Abbr	Office	Email
Donghoon Lee	DL	Bass 437	donghoon.lee (at) yale.edu
Hussein Mohsen	HM	Bass 437	hussein.mohsen (at) yale.edu

## General Course Policy

### First Meeting

The first lecture will be held on Mon. Jan 14, 2019. Somewhat confusingly, Friday, January 18th has been declared an “academic Monday” due to Martin Luther King Jr. Day (1/21/2019), and so the course’s **third** meeting will be on Friday, January 18th.

### Snow Days (general policy)

We have built into the class schedule the potential for snow days. To avoid last minute uncertainty and confusion, we will not wait until Yale officially closes the university for snow (which only happens in the most extreme of blizzards). If the weather looks particularly problematic a few days before (e.g., on Sat. for a Mon. class), we will preemptively cancel via the class email list, which means it important for all to be on this list.

### Grading Policy

We expect that this year the weighting scheme will be to a first approximation:

Category	% of Total Grade
Midterm Quiz	15%
Final Quiz	15%
Discussion Section	20%
Homeworks	20%
Final Project	30%

## Relevant Yale College Regulations

Students may have questions concerning end-of-term matters. Links to further information about these regulations can be found below:

- <http://catalog.yale.edu/ycps/academic-regulations/reading-period-final-examination-period/>
- <http://catalog.yale.edu/ycps/academic-regulations/completion-of-course-work/>
- Brief presentation on how to cite correctly :  
[http://archive.gersteinlab.org/mark/out/log/2012/06.12/cbb752b12/cbb752\\_cite.ppt](http://archive.gersteinlab.org/mark/out/log/2012/06.12/cbb752b12/cbb752_cite.ppt)

## Plagiarism

Below is a message from the Dean of Yale College about citing your references and sources of information and plagiarism:

*" You need to cite all sources used for papers, including drafts of papers, and repeat the reference each time you use the source in your written work. You need to place quotation marks around any cited or cut-and-pasted materials, IN ADDITION TO footnoting or otherwise marking the source. If you do not quote directly – that is, if you paraphrase – you still need to mark your source each time you use borrowed material. Otherwise you have plagiarized. It is also advisable that you list all sources consulted for the draft or paper in the closing materials, such as a bibliography or roster of sources consulted. You may not submit the same paper, or substantially the same paper, in more than one course. If topics for two courses coincide, you need written permission from both instructors before either combining work on two papers or revising an earlier paper for submission to a new course. It is the policy of Yale College that all cases of academic dishonesty be reported to the chair of the Executive Committee.... "*

*" Academic integrity is a core institutional value at Yale. It means, among other things, truth in presentation, diligence and precision in citing works and ideas we have used, and acknowledging our collaborations with others. In view of our commitment to maintaining the highest standards of academic integrity, the Graduate School Code of Conduct specifically prohibits the following forms of behavior: cheating on examinations, problem sets and all other forms of assessment; falsification and/or fabrication of data; plagiarism, that is, the failure in a dissertation, essay or other written exercise to acknowledge ideas, research, or language taken from others; and multiple submission of the same work without obtaining explicit written permission from both instructors before the material is submitted. Students found guilty of violations of academic integrity are subject to one or more of the following penalties: written reprimand, probation, suspension (noted on a student's transcript) or dismissal (noted on a student's transcript). "*

Also, it might be of interest to people, to look at this [recent article regarding academic dishonesty](#).

## Weekly Discussion Sections & Readings

### Time and Location

BASS 405 (or BASS 205 for 2/8 & 3/1) 1:00p - 2:00p

### Format

The standard discussion section involves student presentations on 1 or 2 papers. Some discussion sections will involve hands-on skill-building demos taught by the teaching fellows, such as the use of R, High Performance Computing, and GitHub. The exact format will be determined based on the size of the class. However, we generally require the following:

- Each week, students are expected to bring approx. one page (3-4 paragraph) summaries of each paper they read to the section. We will collect a hard copy during each session, but if you'd like to save some trees, we will accept electronic submission. Please submit PDF to [cbb752 \(at\) gersteinlab.org](mailto:cbb752@gersteinlab.org) BEFORE each section.
- Each student will give one presentation about a selected paper (approx. 20 min).
- Students will be graded on a combination of the written summary, presentation, and participation in discussions.
- If you are presenting, you are exempt from writing a summary.
- Please notify TFs in advance if you cannot come to the discussion session. Student can miss up to one discussion section without a penalty.

### Section Readings

Reading assignments for discussion sessions are listed below:

#### Session 0

- How to (seriously) read a scientific paper, on your own. [\[Link\]](#)

- (biomedical data)

## Session 1, 1/25, BASS 405

### Next-Gen Sequencing and database

- Goodwin S. et al. "Coming of age: ten years of next-generation sequencing technologies" Nature Reviews Genetics. 17 (2016) [\[PDF\]](#)
- Wheeler DA et al. "The complete genome of an individual by massively parallel DNA sequencing," Nature. 452:872-876 (2008) [\[PDF\]](#)

## Session 2, 2/1, BASS 405

### Proteomics

- A draft map of the human proteome. Nature 509,575–581 (29 May 2014) [\[PDF\]](#)
- Mass-spectrometry-based draft of the human proteome. Nature 509, 582–587 (29 May 2014) [\[PDF\]](#)

## Session 3, 2/8, BASS 205 (Note Room Change)

### Debate I

- Why most published research findings are false [\[PDF\]](#)
- Gencode vs Salzberg et al. debate
  - [News Article: New human gene tally reignites debate](#)
  - [Salzberg CHES paper using GTEx](#)
  - [GENCODE's rebuttal](#)

## Session 4, 2/15, BASS 405

Help session on Quiz 1 - TFs prepare materials on SW alignments and Q&A session

(Optional read)

- Altschul SF, Gish W, Miller W, Myers EW, Lipman DJ. (1990) Basic local alignment search tool. Journal of Molecular Biology, 215(3):403-10. PMID: 2231712. [\[PDF\]](#)
- T.F. Smith and M.S. Waterman. (1981) Identification of common molecular subsequences. Journal of Molecular Biology, 147(1): 195-7. PMID: 7265238. [\[PDF\]](#)

## Session 5, 2/22, BASS 405

## Debate II - Phylogenetics (cladistics vs phylogenetics)

- Suggested PDFs:
  - [\[1\]](#)
  - [\[2\]](#)

## Session 6, 3/1, BASS 205 (Note Room Change)

### Deep learning for genomics

- A primer on deep learning in genomics [\[PDF\]](#)
- Deep learning for biology [\[PDF\]](#)

(spring recess)

## Session 7, 3/29, BASS 405

- Zhou, AQ, O'Hern, CS, Regan, L (2011). Revisiting the Ramachandran plot from a new angle. *Protein Sci.*, 20, 7:1166-71 [\[PDF\]](#)
- Dill KA, Ozkan SB, Shell MS, Weikl TR. (2008) The Protein Folding Problem. *Annu Rev Biophys*, 9, 37:289-316. PMID: 2443096. [\[PDF\]](#)
- Bowman GR, Beauchamp KA, Boxer G, Pande VS. "Progress and challenges in the automated construction of Markov state models for full protein systems," *J. Chem. Phys.* 131 (2009) 124101 [\[PDF\]](#)

## Session 8, 4/5, BASS 405

(Potential Papers TBD)

- Perelson AS. Modelling viral and immune system dynamics. *Nat Rev Immunol.* 2002 Jan;2(1):28-36. [\[PDF\]](#)
- Modeling the Spread of Ebola [\[PDF\]](#)

## Session 9, 4/12, BASS 405

### Debate III - Cancer incidence

- Suggested PDFs:
  - Debate reignites over the contributions of 'bad luck' mutations to cancer [\[Link\]](#)
  - The simple math that explains why you may (or may not) get cancer [\[Link\]](#)

Session 10, 4/19, BASS 405

Help session on quiz 2 / final project
